

Configure workflow triggers

Workflow triggers determine **when** a new workflow instance is started.

In the template the section is called "**Workflow Triggers**".

Template triggers: basic fields

1. In the template → section **Workflow Triggers**.
2. **New**.
3. Field **Workflow Event** select (AssistEdit → list "AWF Table Workflow Events").
4. **Active = Yes**.
5. **Priority** set (order when several matching triggers exist).

Trigger rules: when may a trigger fire?

On the trigger there is a **Rule Group Code**. Via the action "**Show Rules**":

1. mark the trigger.
2. **Show Rules**.
3. Maintain rules/rule conditions as in [Step rules](#) .

Important system behavior:

- If **no rule conditions** exist for this trigger rule group, the trigger is considered satisfied (the trigger then fires in principle).

OnAfterModify: Monitored fields

For the event **OnAfterModify** there is the action "**Monitored Fields**".

- 1. Mark the trigger with the workflow event **OnAfterModify** .
- 2. Action "**Monitored Fields**".
- 3. select fields (lookup via "Fields Lookup").

- In the current implementation, an OnAfterModify trigger is **only** started when **at least one monitored field** is maintained **and** this field has actually changed.
- If no monitored fields are maintained, the trigger is not started on OnAfterModify.
