

The minimum configuration: when is a workflow template "valid"?

A workflow template is only fully usable in this app once at least these criteria are met:

1. **Active = Yes** (the template must be active)
2. **Primary Table** is set
3. **Rule Set** exists (is created/updated automatically when the primary table is set)
4. **At least one normal step (Step Type = Normal)** exists
5. **At least one workflow trigger** exists and is **active**

When you activate the template, the app runs a validation and shows an error list if necessary.
