- [Document Class Setup](#)
- [User Setup](#)
- [OAuth 2.0 Setup](#)
- [Additional search queries](#)

Permission sets

In order to use the modules, the appropriate authorization set must be assigned to the respective users.

The following are supplied with:

- DXP Core Admin - DEXPRO Core Administrator
- DXP Core User - DEXPRO Core User
- DXP FREEZE Admin - DEXPRO FREEZE Administrator
- DXP FREEZE User - DEXPRO FREEZE User

DEXPRO Core

The DEXPRO Core manages the individual DEXPRO apps and their documents per client.

All documents that have been entered and processed via the various DEXPRO modules in Microsoft Dynamics 365 Business Central are displayed. A global number series, which is used across all DEXPRO apps, is used to track individual documents. This offers the advantage that users only have to work with one number series per document.

Further information can be found [here](#).

Freeze Setup

In the FREEZE setup, both the connection to the Freeze Archive System and the processing within the app are set up.

Menu

 [Additional Search Queries](#)  [Document Class Setups](#)  [OAuth 2.0 Setup](#)  [User Setup](#)

Document Class Setup

This menu item takes you to the setup for the [document classes](#).

OAuth 2.0-Setup

The users and their access tokens for OAuth 2.0 authentication are managed in this [menu item](#).

User Setup

You can access the user assignment to the OAuth users via this [menu item](#).

Additional Search Queries

[Setting up additional search queries](#) is particularly useful if you want to display archive folders that have not been archived via Freeze in BC. However, there are also other use cases.

FastTabs

General

You can activate/deactivate the use of this app in this FastTab.

General

Document Class Setup

In the document class setup, the mapping between the respective document class and your export interface is done. Furthermore, the field mapping of each document class is downloaded here, creating a set of standard fields and their usage in Microsoft Dynamics 365 Business Central.

The document class setup is cross-app and is managed via the DEXPRO Core.

User Name	Show all results	Alternative Authentication Code
→ <u>KOEPKE</u>	<div>⋮</div> <input checked="" type="checkbox"/>	

Alternative authentication: If users are to access the archive with alternative authentication, this can be entered here.

Show all results: The additional search queries (just like the full text search) only provide results for users who have been explicitly authorized to do so. This is necessary because archive folders that have not been archived via BC cannot be checked for effective authorizations due to the lack of a table number.

Additional search queries

Creation of additional search queries

Below I have created a query that is appended to the system search query when you open Freeze via a record (here: vendor items - table 25). *Search queries with the same table number are OR-linked.*

Additional queries (FREEZE) ✓ Saved 🔖 📄 🔗

🔗	🔍	📄	+ New	Edit List	Delete	Related	Automate	Fewer options	🔗	🔍	☰
Query Name ↑	Table No.	Table Caption	Attach Company	Disabled							
→ VendLdgEntry	25	Vendor Ledger Entry	<input checked="" type="checkbox"/>	<input type="checkbox"/>							

Creation of additional search queries

You can access the query lines via **Related**:

Freeze additional query lines ✓ Saved 📄 🔗

Search for Field Name	Search Value Source (Field No.)	Search Value Source Caption	Fixed Search Value	Boost fac				
→ No	6	Document No.		0				
TableNo	0		124	0				

Search by field name - Specifies the value of the field name to be used for the search query. These are the native fields of the archive software, but also data record fields saved in any form:

Search value source (field no.) - Specifies the value to be searched for in combination with the field name.

Fixed search value - The fixed search term is used instead of the search value.
