Freeze Queue Entries

All archiving processes are listed and processed here.

Queue Entry Fields

- **Entry No.**: Sequential number of the queue entry.
- **Record Title**: Title of the record to be archived.
- **Record Type**: The type of archive folder (e.g. Invoice, Credit Memo, Miscellaneous).
- **Status**: The current status of the entry:
  - `Imported` – The entry has just been created and is waiting to be picked up.
  - `Waiting` – The entry is queued and will be archived on the next processing run.
  - `Processed` – The record has been sent to the Freeze archive and is awaiting verification.
  - `Archived` – Archiving was completed and verified successfully.
  - `Error` – An error has occurred (see Error Notice / Last detailed error).
- **Error Notice**: Brief error description for failed archiving operations.
- **Last detailed error**: Full error message with details.
- **Retry count**: Number of retry attempts so far.
- **Reference Date**: The reference date under which the record is stored in the archive.
- **Attachment count not matching**: Indicates whether the number of local attachments matches the count in the archive.

The processing Job Queue Entry

Queue entries are processed automatically by codeunit `70954898 DXP Freeze Queue Processing`. You do **not** have to create this Job Queue Entry manually: it is created automatically the first time the **Freeze Setup** page is opened.

- **Object Type**: Codeunit
- **Object ID**: 70954898
- **Recurrence Interval**: 1 minute
- **Initial status**: **On Hold** – an administrator must set the entry to *Ready* to start automatic processing.

> On each run, the job works through the queue in the following order: it first clears entries that are already `Archived`, then retries entries in `Error` (up to a maximum of 3 retries), verifies entries in `Processed` against the archive, and finally archives entries in `Waiting`.
