Freeze Storage

The archive memories of the connected Freeze System are managed here.

Fields

- **Name**: The unique name of the archive store.
- **Description**: An optional description of the archive store.
- **API Link**: The API URL of the archive store. This is automatically retrieved from the FREEZE system.

Archive stores are automatically synchronized from the connected FREEZE system when the page is opened. The store specified as **Default Store** in the Freeze Setup is used preferentially for searches and archiving operations.
