User Settings

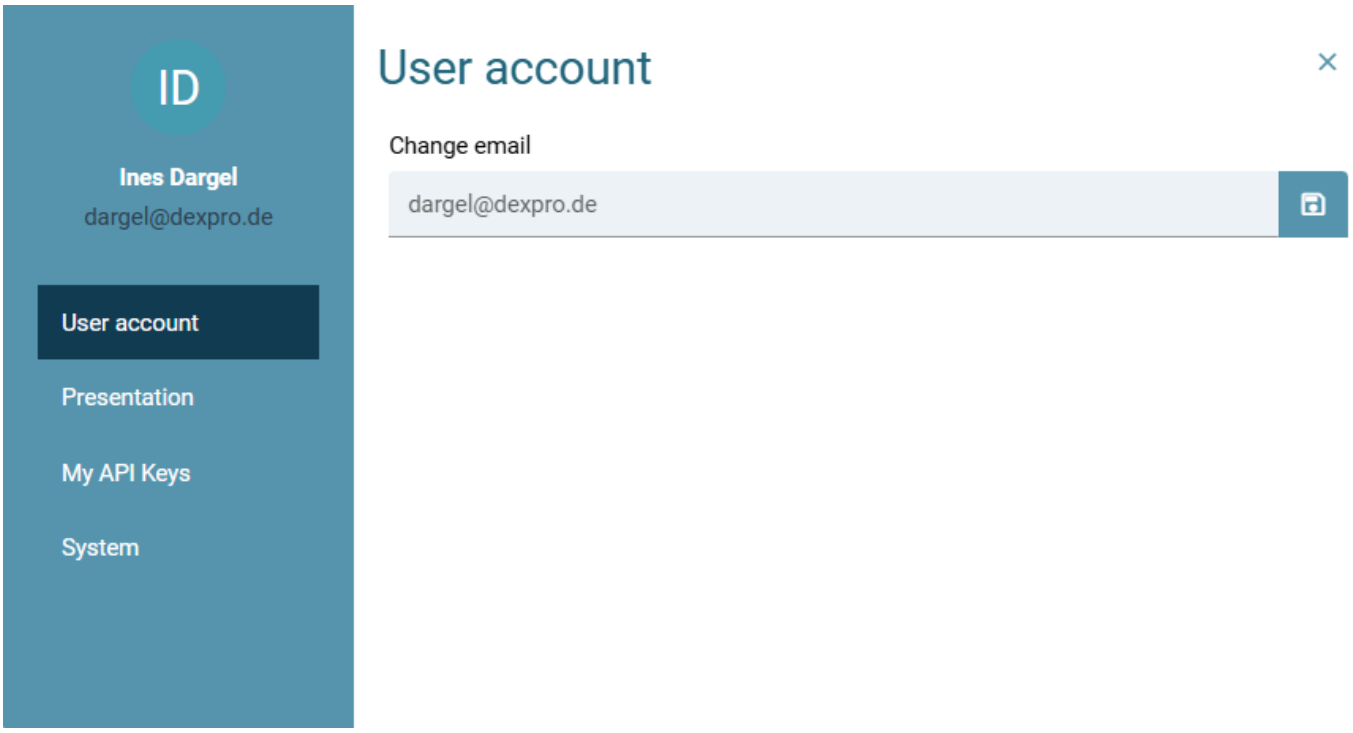

You can open the user settings by clicking on the circle with your initials in the navigation bar (left side of the user interface) and then selecting the gear icon.

Setting options

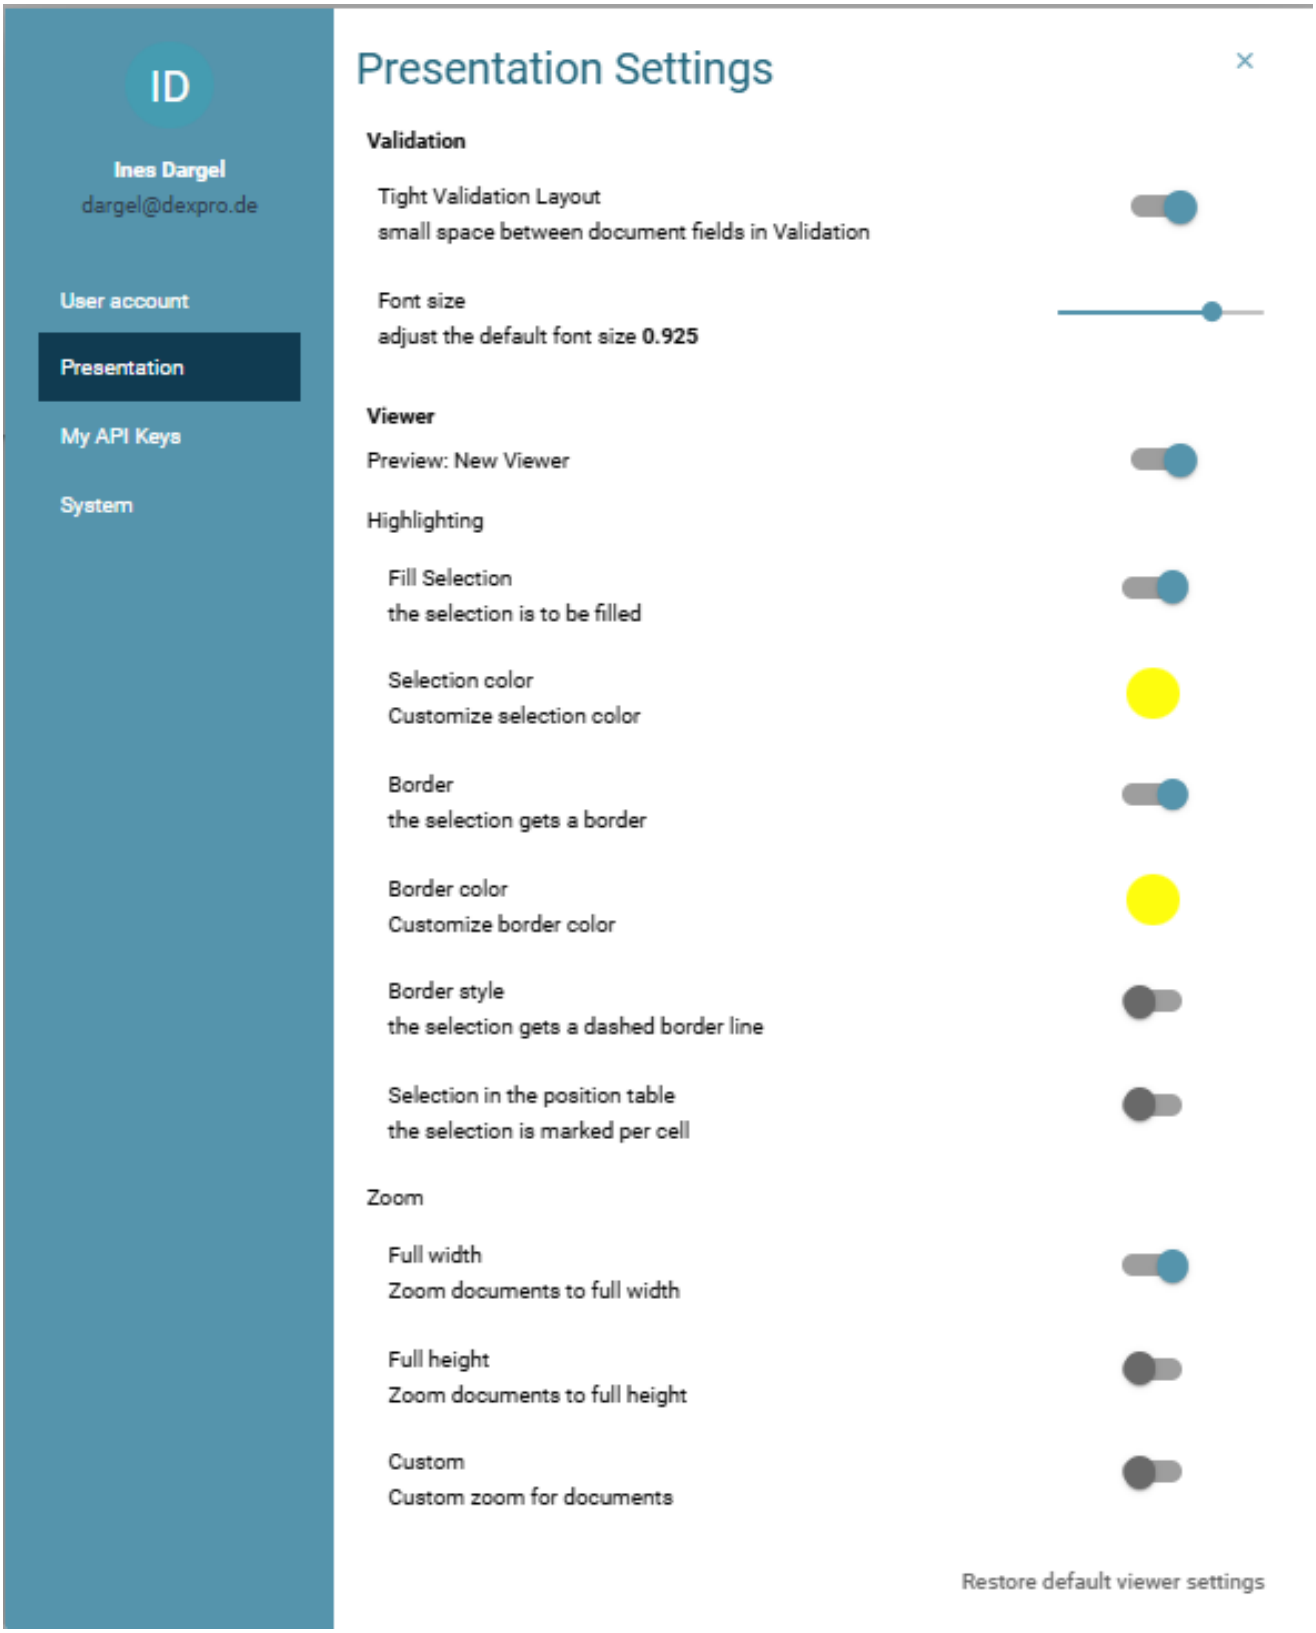

User account

You can change your e-mail in the user account tab.

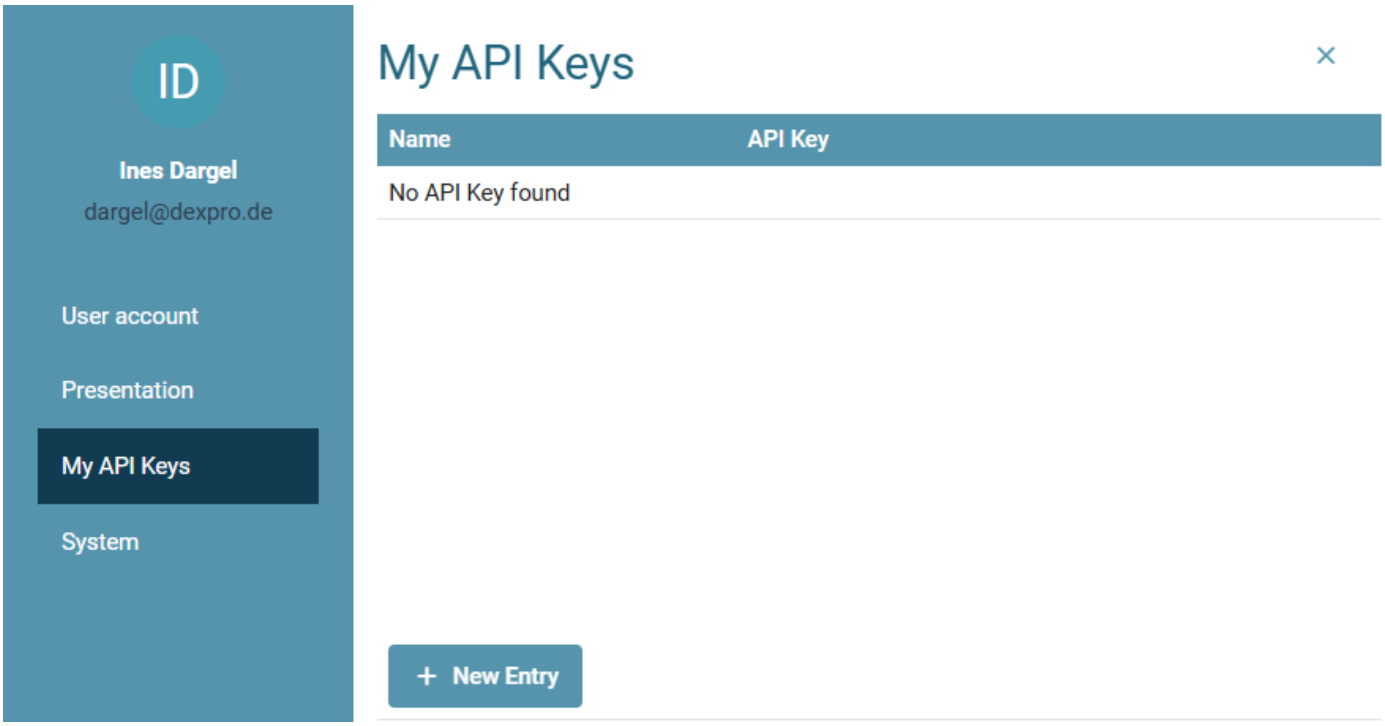

Presentation

Use the button to specify how the areas are displayed in the application.

My API Keys

You can create, view and copy your API keys to the clipboard in the tab for My API Keys.

System

System Information

You can display information about your system in the System tab. This includes, for example, the product version, build information, information about the server's operating system, etc.

By clicking on "Copy all", you can copy the system information to your clipboard and send it with support tickets to help you process support cases.
