

# Viewer in Target Document

The SQUEEZE Viewer can also be displayed in the resulting target documents (Purchase Invoices and Purchase Orders). This allows users to view the originally scanned document at any time without having to navigate back to the SQUEEZE document.

## Activation

The feature is enabled in the **SQUEEZE Setup** in the **Viewer** FastTab via the **Viewer in Target Document** toggle.

## How it works

When the feature is enabled, the SQUEEZE Viewer appears as a FactBox on the following pages:

- **Purchase Invoice:** The viewer displays the originally scanned document from which the invoice was created.
- **Purchase Order:** For order confirmations, the viewer displays the associated scanned document.

The viewer supports all standard functions, such as highlighting field locations. Detached mode is also supported.

## Note

The link between the target document and the SQUEEZE document is established automatically via DEXPRO Core. The viewer is only displayed if a corresponding SQUEEZE document exists for the respective purchase document.
